# Use-Case Specification: Register

## 1. Use-Case Name

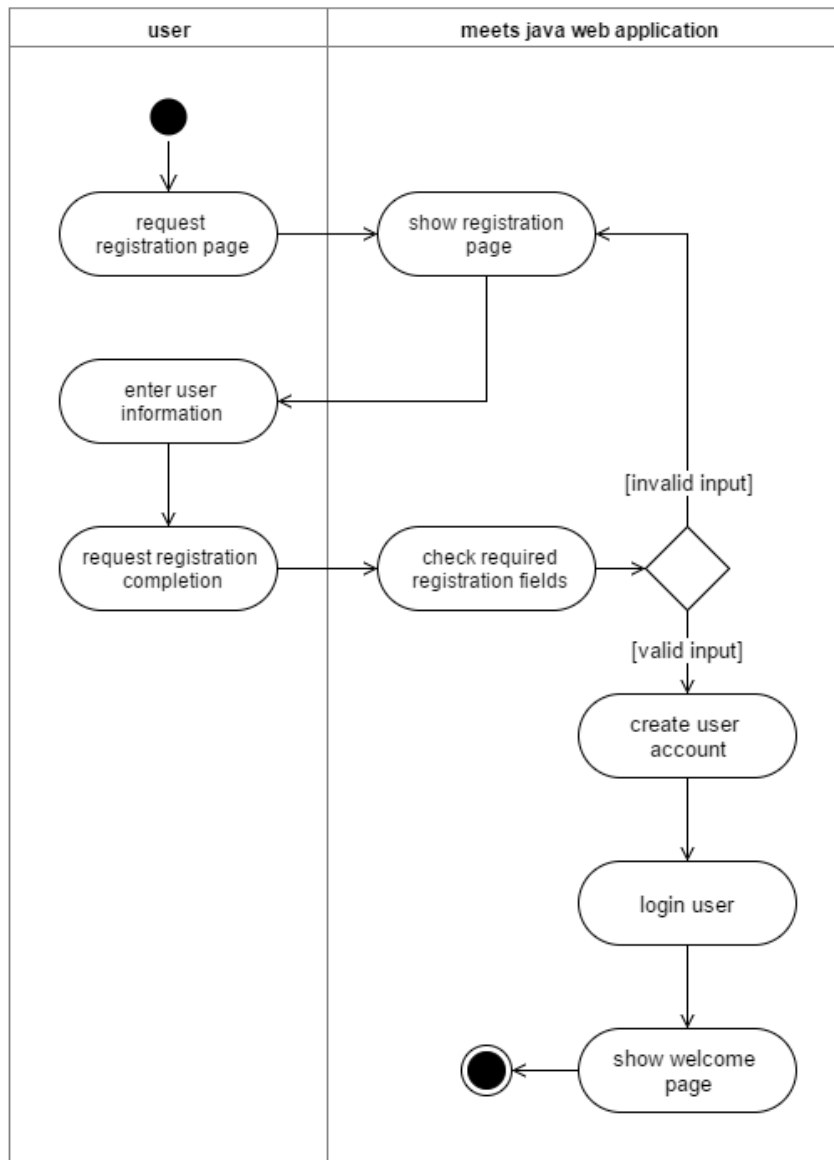

### 1.1 Brief Description

This use case enables the guest user to create a new account for the meets platform. In this process he has to fill out the required form fields to complete a successful registration to the system.

## 2. Flow of Events

### 2.1 Basic Flow

Use-Case Specification: <Use-Case Name>Register	Date: 01/11/2016
<document identifier>	

Mockup:

The mockup shows a web browser window with a single tab labeled 'Page 1'. The address bar contains 'https://meets.com'. The main content area features a placeholder for a logo, represented by a box with an 'X' and the word 'Logo'. Overlaid on this is a 'Registration' modal dialog. The dialog has a title bar with a close button (X). It contains five text input fields: 'Username', 'Password', 'Confirm password', 'Email', and 'Location'. Each field has a small 'X' icon on its right side. At the bottom of the dialog is a 'Confirm' button with a checkmark icon.

Feature File:

```

Feature: register
  As a guest
  I want to register a new account

  Scenario: register successfully
    Given I am not logged into the System
    When I press the register button
    And I write my Username into the username field
    And I write a password into the password field
    And I repeat my password in the confirm password field
    And I write my Email into the email field
    And I write my Location into the location field
    And I press the confirm button
    Then I should be automatically logged into the System
    And redirect to the main page

  Scenario: register failed
    Given I am not logged into the System
    When I press the register button
    And I fail to fill all fields with correct data
    Then display error message
  
```

### 3. Special Requirements

n/a

### 4. Preconditions

The user that tries to register must be logged out of the system.

### 5. Postconditions

After the process of the user registering to the system, there is a new user stored in the database and ready for use. That means the user can log into his account immediately.

### 6. Extension Points

n/a
